

HD / SD GRAPHICS • DVD AUTHORIZING

Matchframe's talented digital artists create exciting graphics and animations in both HD and SD utilizing our versatile Macintosh G5 Graphics Workstations. Our rooms features Adobe's powerful After Effects software, as well as Photoshop, Illustrator, Commotion, and Final Cut Pro. Several terabytes of high-speed Medea RAID storage provides real-time capture and playback of HD as well as SD media.

Our AJA Kona3 HD and 601 video capture boards provide real-time digital input and output. Files may be captured from or output to a client's Firewire drive or to a DVD-R or CD-R. Content may be output at a full range of resolutions: from uncompressed 10-bit Quicktime movies to Image sequences or internet-ready compressed files for streaming or download. Files may also be uploaded to or downloaded from our password-protected FTP server.

Clients may also have finished versions of feature films, television shows, music videos, and corporate projects, as well as unedited dailies, authored for easy viewing using Matchframe's Sonic Solutions' Fusion DVD system. DVD authoring services range from simple chapter headings to customized graphics and animation that add visual interest and maximize the interactive capabilities of the DVD format.
